

This Project has received funding from the European Union's Horizon 2020 programme under Grant Agreement No. 777554

EPTRI: European Paediatric Translational Research Infrastructure. The bridge towards the future of paediatric medicine

Create the framework for the future research infrastructure (RI) focused on paediatric medicines development, integrating technology-driven aspects with clinical trials

Accelerate paediatric drug development processes and include most relevant technological innovations in research for children's health

The infrastructure will be composed of five platforms:

- * Paediatric medicines discovery and early drug development
- * Biomarkers use in paediatric medicines development
- * Paediatric pharmacology
- * Formulation science
- * Underpinning paediatric clinical studies

26 partners from 19 EU / non EU countries

Coordinated by Consorzio per Valutazioni Biologiche e Farmacologiche
