

EPTRI: European Paediatric Translational Research Infrastructure. The bridge towards the future of paediatric medicine

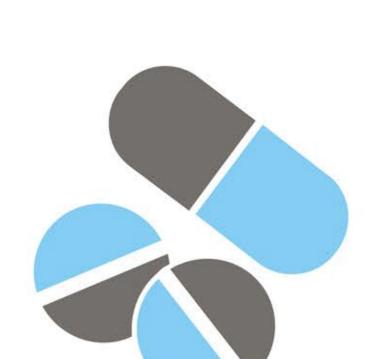

Create the framework for the future research infrastructure (RI) focused on paediatric medicines development, integrating technology-driven aspects with clinical trials

Accelerate peadiatric drug development processes and include most relevant technological innovations in research for children's health

- 4 thematic platforms:
 - Human Development and Paediatric Medicines Discovery
 - Paediatric Biomarkers and Biosamples
 - Developmental Pharmacology
 - Paediatric Medicines Formulations and Medical Devices
- the scientific domain "Underpinning Medicines Development to Paediatric Studies"

26 partners from 19 EU / non EU countries Coordinated by Consorzio per Valutazioni Biologiche e Farmacologiche
