KiDSBari

Who are we?

We are Kids Impacting Disease through Science, a YPAG group of young people that together contribute to research on health and well being of pediatric patients.

KiDS Bari

Awareness campaigns

In KIDS Bari we work to raise awareness about rare pediatric diseases through social media.

One of the most important awareness campaigns is Rare Disease Day.

Training plan

Before giving a real contribute to research, our group attends lessons held by specialists, in order to learn specific skills.

During our meetings we focus on:

Biomedicine

Innovation

Clinical trials

Digital health

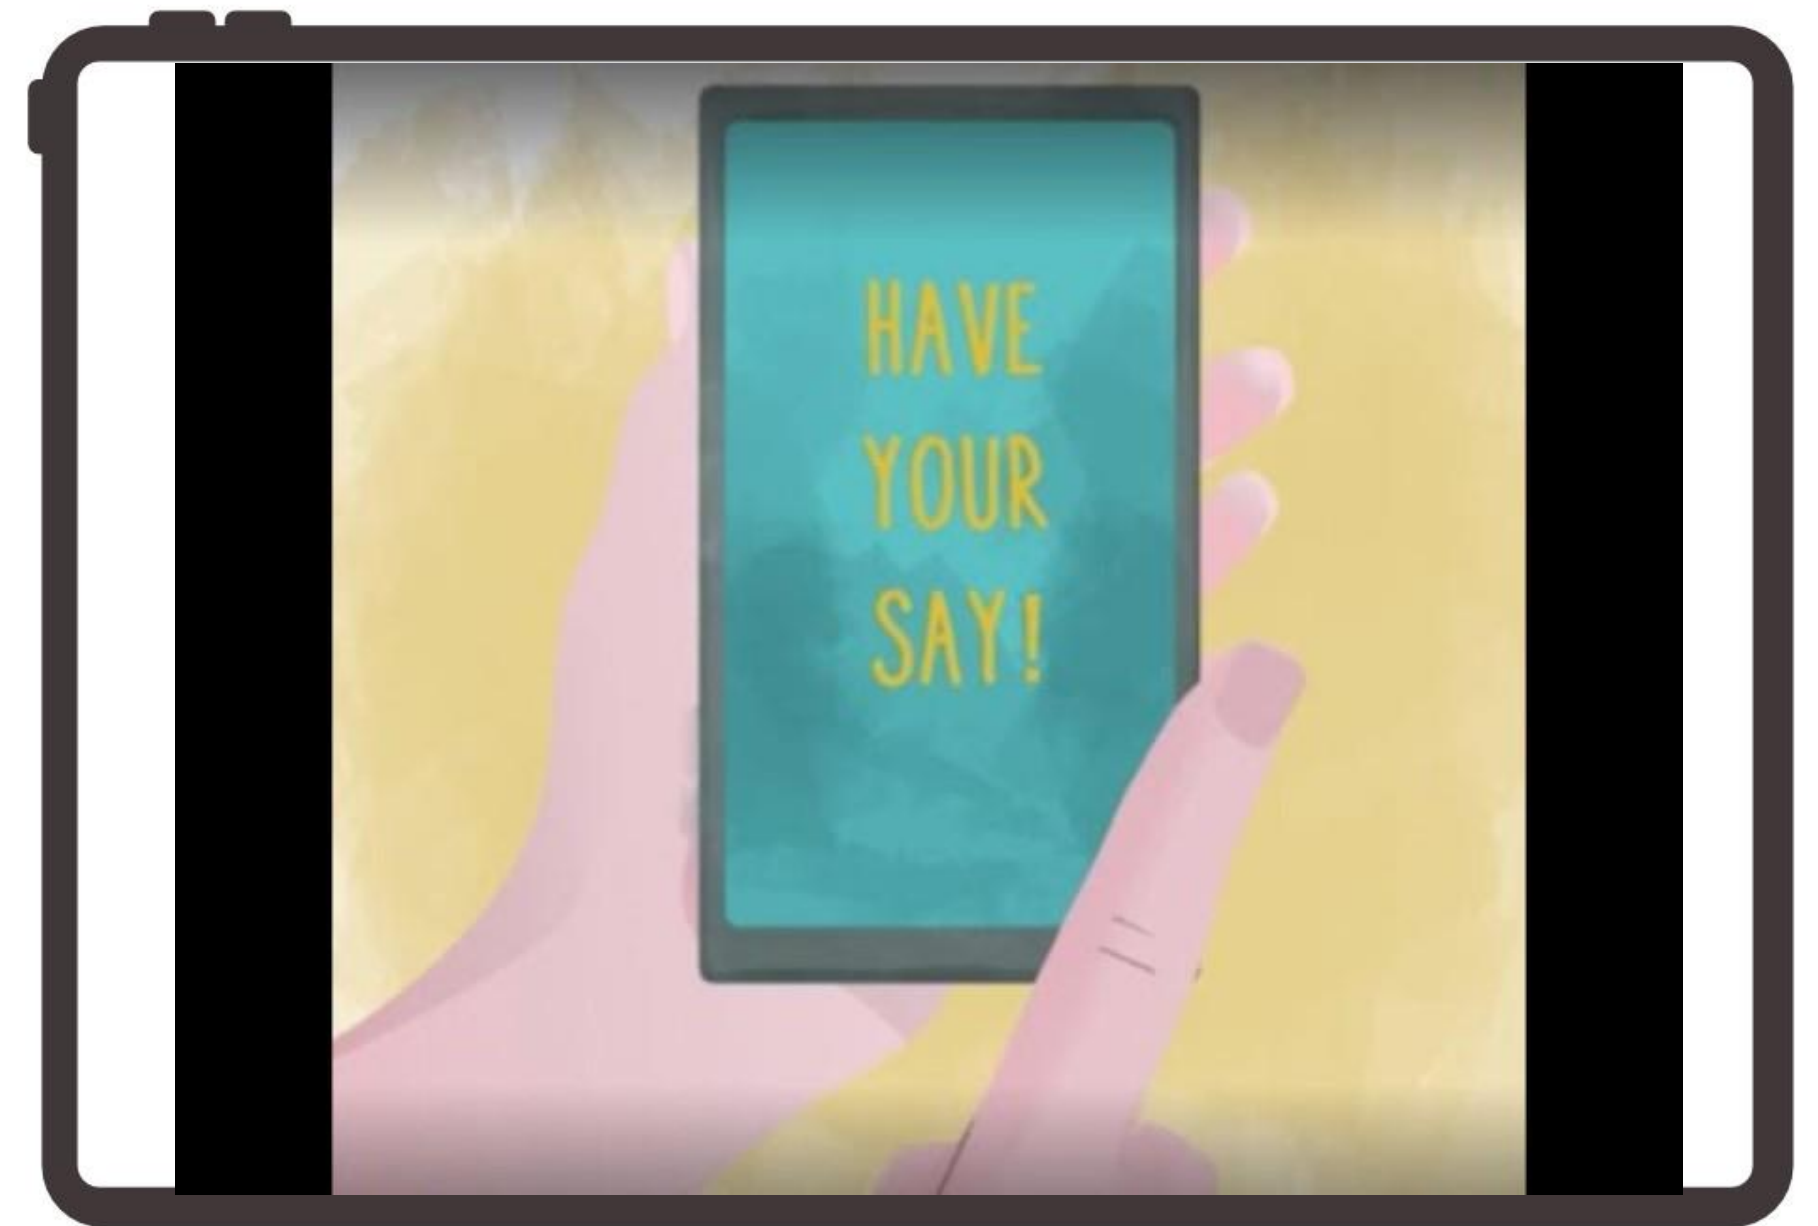

Young patient's rights

Bringing youth together from all around the world!

Our group also participates to scientific conferences, where we can share the results of our activities, in order to highlight the importance of including YPAG groups in the clinical research.

One of these projects is hosted by the council of europe and there will be a conference in april in Strasbourg about this initiative

KiDSBari

Bringing youth together from all around the world!

For the last 11 years, all the YPAGs in the ICAN network meet in the ICAN Summit. In 2024, the 10th Summit, was hosted by us in Bari.
